

# THE RISE OF

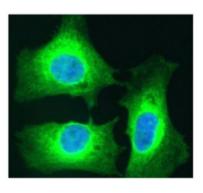

# RECOMBINANT ANTIBODIES

Notch 2 Recombinant Antibody [B6] (OAAV00640)

Cardiac Troponin I Recombinant Antibody [scFc 180] (OAAV00763)

NFKB2 Recombinant Antibody [SAIC-26C-15] (OAAV00728)

Recent analyses indicate as much as 50% of commercial antibody products do not work as intended. To address the outsized effect of poor antibodies on the reproducibility crisis, researchers are pushing for a transition to recombinant antibody production systems. Though Aviva Systems Biology has long provided polyclonal antibody products, we have launched a recombinant antibody discovery and development platform to support this effort and improve antibody reliability.

Table: Recombinant antibodies outperform poly- and monoclonal antibodies. Percent of evaluated commercial antibodies that correctly bind intended target.

Assay Format	Western Blot (WB)	Immunoprecipitation (IP)	Cellular Immunoflouresence (IF)
Recombinant	67%	54%	48%
Polyclonal	27%	39%	22%
Monoclonal	41%	32%	31%

# Harnessing the Advantages of Recombinant Antibody Technology

Recombinant antibodies offer several advantages over other types of antibodies. Here are some key advantages:

# · High specificity:

Through the use of recombinant DNA technology, specific antibody sequences can be identified, cloned, and expressed, ensuring precise targeting of the desired epitope. This specificity reduces the chances of cross-reactivity, leading to more accurate and reliable results.

# Reduced batch variability and improved reproducibility:

With recombinant antibodies, each production batch can be carefully controlled and characterized, ensuring consistent batch-to-batch performance. This reproducibility is crucial for experimental consistency.

## · Availability for difficult targets:

Recombinant antibody technology is particularly useful when studying highly conserved or difficult-to-obtain antigens, since recombinant antibody methods allow researchers to access antibodies that specifically recognize such challenging antigens.

## Scalability and renewable supply:

Recombinant antibodies can be produced in large quantities with greater ease compared to traditional antibody production methods. This innovative platform allows for the sustainable and continuous production of the same antibodies, every time.
