

Working in larger model animal species? Biorbyt has the antibodies for you

In recent years, we have made substantial progress to embrace the 3R's (Replacement, Reduction and Refinement) with respect to numbers of animals used in basic research. It is therefore even more important to ensure that you select the right animal model when your work enters the translational phase and moves away from *in vitro* or rodent models into large animals more analogous to Humans in size, lifespan, physiology, anatomy and disease states.

A variety of species are now coming to the fore in this area, including Pigs, Dogs and Cows, each with their own advantages. One problem facing researchers moving into larger animal models however is the availability of reagents specific to these species. The majority of antibodies have historically been raised against the more common rodent animal model species, but Biorbyt is working to address this. We are now able to offer a variety of antibodies targeted to larger animal species. If you can't find the target and species you're looking for listed here, please do contact us to check if we have it or search online at www.biorbyt.com
